Choice Theory Nov 10 2021 Dr. William Glasser offers a new psychology that, if practiced, could reverse our widespread inability to get along with one another, an inability that is the source of almost all unhappiness. For progress in human relationships, he explains that we must give up the punishing, relationship-destroying external control psychology. For example, if you are in an unhappy relationship right now, he proposes that one or both of you could be using external control psychology on the other. He goes further. And suggests that misery is always related to a current unsatisfying relationship. Contrary to what you may believe, your troubles are always now, never in the past. No one can change what happened yesterday.

[The Theory of Mind as Pure Act](#) Oct 21 2022

Hollywood Shot by Shot Oct 09 2021 To what extent have Hollywood feature films shaped the meanings that Americans attach to alcoholics, their families, and the alcoholic condition? To what extent has the mass culture of the movie industry itself been conceptually shaped by a broad, external societal discourse? Norman Denzin brings to his life-long study of alcoholism a searching interest in how cultural texts signify and lend themselves to interpretation within a social nexus. Both historical and diachronic in his approach, Denzin identifies five periods in the alcoholism films made between 1932 and the end of the

1980s, and offers a detailed critical reading of thirty-seven films produced during these six decades.

Thought in the Act Aug 27 2020 “Every practice is a mode of thought, already in the act. To dance: a thinking in movement. To paint: a thinking through color. To perceive in the everyday: a thinking of the world’s varied ways of affording itself.” —from *Thought in the Act* Combining philosophy and aesthetics, *Thought in the Act* is a unique exploration of creative practice as a form of thinking. Challenging the common opposition between the conceptual and the aesthetic, Erin Manning and Brian Massumi “think through” a wide range of creative practices in the process of their making, revealing how thinking and artfulness are intimately, creatively, and inseparably intertwined. They rediscover this intertwining at the heart of everyday perception and investigate its potential for new forms of activism at the crossroads of politics and art. Emerging from active collaborations, the book analyzes the experiential work of the architects and conceptual artists Arakawa and Gins, the improvisational choreographic techniques of William Forsythe, the recent painting practice of Bracha Ettinger, as well as autistic writers’ self-descriptions of their perceptual world and the experimental event making of the SenseLab collective. Drawing from the idiosyncratic vocabularies of each creative practice, and building on the vocabulary of process philosophy, the book reactivates rather than merely describes the artistic processes it examines. The result is a thinking-with and a writing-in-collaboration-with these processes and a demonstration of how philosophy co-composes with the act in the making. *Thought in the Act* enacts a collaborative mode of thinking in the act at the intersection of art, philosophy, and politics.

Illusion of Order Apr 15 2022 This is the first book to challenge the broken-windows theory of crime, which argues that permitting minor misdemeanors, such as loitering and vagrancy, to go unpunished only encourages more serious crime. The theory

has revolutionized policing in the United States and abroad, with its emphasis on policies that crack down on disorderly conduct and aggressively enforce misdemeanor laws. The problem, argues Bernard Harcourt, is that although the broken-windows theory has been around for nearly thirty years, it has never been empirically verified. Indeed, existing data suggest that it is false. Conceptually, it rests on unexamined categories of law abiders and disorderly people and of order and disorder, which have no intrinsic reality, independent of the techniques of punishment that we implement in our society. How did the new order-maintenance approach to criminal justice--a theory without solid empirical support, a theory that is conceptually flawed and results in aggressive detentions of tens of thousands of our fellow citizens--come to be one of the leading criminal justice theories embraced by progressive reformers, policymakers, and academics throughout the world? This book explores the reasons why. It also presents a new, more thoughtful vision of criminal justice.

Performance as Political Act Mar 02 2021 Proposing a new source for political impulse in the West, this volume seeks to re-embodiment the political subject, arguing that when the mind has been dominated by mass communication as in Western capitalism the body emerges as a site of opposition. An explication of the making of a modern dance and a comparison of Soviet and American political theatre are linked by a sustained discussion that critiques semiotic and phenomenological approaches to the body and outlines a body politics.

The Theory of the Leisure Class Jul 26 2020 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be

preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface.

The Research Act in Sociology Feb 25 2023

Getting Our Act Together Dec 23 2022 Together we can often achieve things that are impossible to do on our own. We can prevent something bad from happening, or we can produce something good, even if none of us could do it by ourselves. But when are we morally required to do something of moral importance together with others? This book develops an original theory of collective moral obligations. These are obligations that individual moral agents hold jointly but not as unified collective agents. The theory does not stipulate a new type of moral obligation but rather suggests that to think of some of our obligations as joint or collective is the best way of making sense of our intuitions regarding collective moral action problems. Where we have reason to believe that our efforts are most efficient as part of a collective endeavor, we may incur collective obligations together with others who are similarly placed as long as we are able to establish compossible individual contributory strategies towards that goal. The book concludes with a discussion of 'massively shared obligations' to major-scale moral problems such as global poverty. *Getting Out Act Together: A Theory of Collective Moral Obligations* will appeal to researchers and advanced students working in moral, political and social philosophy, philosophy of action, social epistemology and philosophy of social science.

The Research Act Apr 27 2023

ACT and RFT in Relationships Jun 17 2022 Even if you are not a couples therapist, chances are you have dealt with clients whose problems are based in relationship issues. In order to successfully treat these clients, you must first help them understand what

their values are in these relationships, and how their behavior may be undermining their attempts to seek intimacy and connection. Combining elements of acceptance and commitment therapy (ACT) and relational frame theory (RFT), ACT and RFT for Relationships presents a unique approach for therapists to help clients develop and experience deeper, more loving relationships. By exploring personal values and expectations, and by addressing central patterns of behaviors, therapists can help their clients establish and maintain intimacy with their partner and gain a greater understanding of their relationship as a whole. ACT is a powerful treatment model that teaches clients to accept their thoughts, identify their core values, and discover how these values are extended to their relationships with others. RFT focuses on behavioral approaches to language and cognition, and can help clients identify their own expectations regarding relationships and how they might communicate these expectations with their loved ones more effectively. This book aims to shed light on the thought processes behind intimate relationships—from the attraction phase to the end of intimacy—from a functional, contextual perspective.

A Theory of Justice Feb 01 2021 Though the revised edition of *A Theory of Justice*, published in 1999, is the definitive statement of Rawls's view, so much of the extensive literature on Rawls's theory refers to the first edition. This reissue makes the first edition once again available for scholars and serious students of Rawls's work.

Psychological Theories from a Structuralist Point of View Oct 29 2020 Metatheoretical and, more generally, methodological analyses of psychological problems and theories have a long tradition; however, their impact on scientific practice, especially on the clarification and testing of existing psychological theories and the formulation of new ones, has so far been less than spectacular. The increased interest in theoretical psychology visible during the past ten or twenty years is associated with the

hope that a change of this situation will gradually be effected. Thus, in their preface to the proceedings of the founding conference of The International Society for Theoretical Psychology, Baker et al. (1987, pp. Vf) take up once more the objectives of a theoretical psychology formulated by Koch already in 1951: (a) Education in the methodology and logic of science. (b) Analysis of methodological or foundational problems that are more or less unique to psychology. . . (c) Internal systematization of suggestive, but formally defective, theoretical formulations. (d) Intertranslation and differential analysis of conflicting theoretical formulations. (e) Construction of new theory. Reflecting on possible reasons for the relative inefficacy so far of methodological and metatheoretical analyses in psychology, it seems to me that the following two have been of prime importance: (1) Many of the existing analyses are at best tenuously connected to concrete existing psychological theories, i.e., they deal with their subject matter in a too abstract, detached way. This detracts from the persuasive power which their results might otherwise have, and impedes the realization of these results within scientific practice.

Speech Act Theory and Pragmatics Feb 13 2022 In the study of language, as in any other systematic study, there is no neutral terminology. Every technical term is an expression of the assumptions and theoretical presuppositions of its users; and in this introduction, we want to clarify some of the issues that have surrounded the assumptions behind the use of the two terms "speech acts" and "pragmatics". The notion of a speech act is fairly well understood. The theory of speech acts starts with the assumption that the minimal unit of human communication is not a sentence or other expression, but rather the performance of certain kinds of acts, such as making statements, asking questions, giving orders, describing, explaining, apologizing, thanking, congratulating, etc. Characteristically, a speaker performs one or more of these acts by uttering a sentence or

sentences; but the act itself is not to be confused with a sentence or other expression uttered in its performance. Such types of acts as those exemplified above are called, following Austin, illocutionary acts, and they are standardly contrasted in the literature with certain other types of acts such as perlocutionary acts and propositional acts. Perlocutionary acts have to do with those effects which our utterances have on hearers which go beyond the hearer's understanding of the utterance. Such acts as convincing, persuading, annoying, amusing, and frightening are all cases of perlocutionary acts.

Essays in Speech Act Theory Aug 19 2022 Any study of communication must take into account the nature and role of speech acts in a broad context. This book addresses questions such as: - What do we mean? - How do we say it? and - How is it understood? in the broad context of universal, socio-cultural and psychological issues that bear on human communication. It presents an overview of current issues in speech act theory that are at the center of human and social sciences dealing with language, thought and action, building on John Searle's famous article 'How Performatives Work' (included in this book). The contributions by linguists, psychologists, computer scientists, and philosophers thus address issues of communication that are crucial in conversation analysis, cognitive science, artificial intelligence, psychology and philosophy, and a general understanding of how we communicate. The book is suitable for courses with an extensive bibliography for further reading and an Index.

Speech Act Performance Jan 12 2022 Speech acts are an important and integral part of day-to-day life in all languages. In language acquisition, the need to teach speech acts in a target language has been demonstrated in studies conducted in the field of interlanguage pragmatics which indicate that the performance of speech acts may differ considerably from culture to culture, thus creating communication difficulties in cross-cultural

encounters. Considering these concerns, the aim of this volume is two-fold: to deal with those theoretical approaches that inform the process of learning speech acts in particular contextual and cultural settings; and, secondly, to present a variety of methodological proposals, grounded on research-based ideas, for the teaching of the major speech acts in second/foreign language classrooms. This volume is a valuable theoretical and practical resource not only for researchers, teachers and students interested in speech act learning/teaching but also for textbook writers wishing to have an informed opinion on the pedagogical implications derived from research on speech act performance.

ACT in Practice May 16 2022 Acceptance and commitment therapy (ACT) is more than just a set of techniques for structuring psychotherapeutic treatment; it also offers a new, insightful, transdiagnostic approach to case conceptualization and to mental health in general. Learn to put this popular new psychotherapeutic model to work in your practice with this book, the first guide that explains how to do case conceptualization within an ACT framework. ACT in Practice offers an introduction to ACT, an overview of its impact, and a brief introduction to the six core processes of ACT treatment--the six points of the hexaflex model and its pathological alter ego, the so-called inflexahex. It describes how to accomplish case conceptualizations in general and offers précis of the literature that establish the importance and value of case conceptualization. This guide also offers possible alternative case conceptualization for cases from different therapeutic traditions, a great help to therapists who come from a more traditional CBT background. Exercises throughout help you to evaluate the information you have just learned so that you may effectively integrate ACT into your practice.

Words in Action Sep 20 2022 How is the biblical text understood and how does it function in the life of the reader today? Richard Briggs first provides an illuminating introduction

to the nature and claims of speech act theory. This seeks to extend our understanding of both spoken and written means of communication by seeing them not as merely representational or 'reality-depicting', but as acting or causing acts to be performed through the words themselves. Briggs goes on to discuss to what extent the application of speech act theory might be helpful in the interpretation of biblical texts. In one of the first book-length explorations of this topic, he examines in detail several biblical speech acts of particular theological significance, including the confession of sin, forgiveness and teaching. Through exploring the specific ways in which the reader is drawn into the performative action of the biblical text, and how speech act theory forces the reader to look beyond language into the world which gives the language its ability to function, speech act theory is shown to offer valuable insights within today's complex hermeneutical debate. 'A very significant volume . . . ' Alan Torrance, Professor of Divinity, University of Andrews 'An excellent piece of work . . . which is thoroughly acquainted with speech act theory and takes the debate forward in a variety of creative, exegetical and theological ways.' Dr Craig Bartholomew, University of Gloucestershire

Language and Action Sep 27 2020 This work consists of an examination and revision of some of the main theses of Speech Act Theory in relation to the problem of ideology and action-guiding language. Starting from the idea that linguistic philosophy must take into account how the social structure of the linguistic community may influence and direct the way its language is used, a critical method of analysis is proposed, developing Speech Act Theory in a way suitable for this purpose. The main guideline of this proposal is the consideration that a theory of action rather than a theory of meaning should be taken as central in the analysis of language. The notion of illocutionary force, the problem of intentions and conventions in the constitution of speech acts, the definition of context, and the

classification of speech acts, are then discussed. Based on the conclusions of this discussion a pragmatic method for the analysis of language is formulated.

The Practice of Justice Dec 19 2019 Should a lawyer keep a client's secret even when disclosure would exculpate a person wrongly accused of crime? *The Practice of Justice* is a fresh look at this and other traditional questions about the ethics of lawyering.

Foundations of Speech Act Theory Jan 24 2023 *Foundations of Speech Act Theory* investigates the importance of speech act theory to the problem of meaning in linguistics and philosophy. The papers in this volume, written by respected philosophers and linguists, significantly advance standards of debate in this area. Beginning with a detailed introduction to the individual contributors, this collection demonstrates the relevance of speech acts to semantic theory. It includes essays unified by the assumption that current pragmatic theories are not well equipped to analyse speech acts satisfactorily, and concludes with five studies which assess the relevance of speech act theory to the understanding of philosophical problems outside the area of philosophy of language.

A Theory of Discrimination Law Jun 05 2021 Marrying legal doctrine from five pioneering and conversant jurisdictions with contemporary political philosophy, this book provides a general theory of discrimination law. Part I gives a theoretically rigorous account of the identity and scope of discrimination law: what makes a legal norm a norm of discrimination law? What is the architecture of discrimination law? Unlike the approach popular with most textbooks, the discussion eschews list-based discussions of protected grounds, instead organising the doctrine in a clear thematic structure. This definitional preamble sets the agenda for the next two parts. Part II draws upon the identity and structure of discrimination law to consider what the point of this area of law is. Attention to legal doctrine rules out many answers

that ideologically-entrenched writers have offered to this question. The real point of discrimination law, this Part argues, is to remove abiding, pervasive, and substantial relative group disadvantage. This objective is best defended on liberal rather than egalitarian grounds. Having considered its overall purpose, Part III gives a theoretical account of the duties imposed by discrimination law. A common definition of the antidiscrimination duty accommodates tools as diverse as direct and indirect discrimination, harassment, and reasonable accommodation. These different tools are shown to share a common normative concern and a single analytical structure. Uniquely in the literature, this Part also defends the imposition of these duties only to certain duty-bearers in specified contexts. Finally, the conditions under which affirmative action is justified are explained.

Sociological Methods Mar 14 2022 A comprehensive collection of contemporary and classical readings on sociological method, this book provides students with systematic analyses of each of the major strategies employed in sociological research. It may be used as a supplement or as the basic set of readings for all courses in methods. The book contains thirteen sections dealing with theory and its development; issues of sampling units; problems of developing new measurement techniques; difficulties surrounding the interview (with special emphasis on interviewing deviant, hostile, and silent respondents); the nature of causation; and a review of the major methods of proof available to the sociologist. Actual research studies, focusing in turn on the experiment, the survey, participant observation, life-histories, and unobtrusive analysis, are also included. Each section is preceded by an introduction, that defines the major issues in each paper, offers a discussion of problems not covered explicitly in the readings, and in general shows how each paper contributes to a view of interactional research processes. Because of its interactional approach, its use of classic articles, its anticipation

of problems not yet formulated clearly in the literature, its illustrations of how social organizations may be studied, its inclusion of articles relevant to the social psychology of experiments, and its new statements on the ethics of research, this book will be invaluable in methods courses. Especially when used in conjunction with its companion text, *The Research Act*, the book provides perhaps the most original and most useful compendium available to students today.

Foundations of Speech Act Theory May 24 2020 With speech act theory assuming a renewed importance in the field of literary studies and philosophy, *Foundations of Speech Act Theory* offers a timely, thorough and, above all, compelling examination of the complexities of illocutionary acts, performatives, and their phenomenological basis. Savas Tsohatzidis has collected an impressive range of international scholars on the subject. Clearly demonstrating the relevance of speech act theory to semantic theory, the collection further interrogates the inability of pragmatic theories of illocution to properly locate such speech acts within the logic of phenomenology and intersubjectivity. Extending this analysis to the related discipline of philosophy, Tsohatzidis's contributors provide an elucidating investigation of problems lying outside the field of the philosophy of language, while also offering other alternative and rigorous perspectives for linguistic and philosophical inquiry.

[Acceptance and Commitment Therapy](#) Jul 06 2021 *Acceptance and Commitment Therapy (ACT)* is a unique empirically-based psychological intervention that uses acceptance and mindfulness processes, and commitment and behaviour change processes to produce psychological flexibility. Steven C. Hayes, who helped develop ACT, and co-author Jason Lillis provide an overview of ACT's main influences and its basic principles In this succinct and understandable survey, the authors show how ACT illuminates the ways that language encourages unhelpful skirmishing in clients' psychic lives, and how to use ACT to help clients accept

private experiences, become more mindful of thoughts, develop greater clarity about personal values, and commit to needed behaviour change. The latest edition in the Theories of Psychotherapy Series. Acceptance and Commitment Therapy examines the therapy's history and process, evaluates the therapy's evidence base and effectiveness, and suggests future directions in the therapy's development..

A Practical Guide to Acceptance and Commitment Therapy Dec 31 2020 This book is the most practical clinical guide on Acceptance and Commitment Therapy (ACT said as one word, not as initials) yet available. It is designed to show how the ACT model and techniques apply to various disorders, settings, and delivery options. The authors of these chapters are experts in applying ACT in these various areas, and it is intriguing how the same core principles of ACT are given a nip here and a tuck there to fit it to so many issues. The purpose of this book, in part, is to emboldened researchers and clinicians to begin to apply ACT wherever it seems to fit. The chapters in the book demonstrate that ACT may be a useful treatment approach for a very wide range of clinical problems. Already there are controlled data in many of these areas, and soon that database will be much larger. The theory underlying ACT (Relational Frame Theory or "RFT"- and yes, here you say the initials) makes a powerful claim: psychopathology is, to a significant degree, built into human language. Further, it suggests ways to diminish destructive language-based functions and ways of augmenting helpful ones. To the extent that this model is correct, ACT should apply to a very wide variety of behavioral issues because of the centrality of language and cognition in human functioning.

Pure Theory of Law Nov 29 2020 Reprint of the second revised and enlarged edition, a complete revision of the first edition published in 1934. A landmark in the development of modern jurisprudence, the pure theory of law defines law as a system of coercive norms created by the state that rests on the validity of a

generally accepted Grundnorm, or basic norm, such as the supremacy of the Constitution. Entirely self-supporting, it rejects any concept derived from metaphysics, politics, ethics, sociology, or the natural sciences. Beginning with the medieval reception of Roman law, traditional jurisprudence has maintained a dual system of "subjective" law (the rights of a person) and "objective" law (the system of norms). Throughout history this dualism has been a useful tool for putting the law in the service of politics, especially by rulers or dominant political parties. The pure theory of law destroys this dualism by replacing it with a unitary system of objective positive law that is insulated from political manipulation. Possibly the most influential jurist of the twentieth century, Hans Kelsen [1881-1973] was legal adviser to Austria's last emperor and its first republican government, the founder and permanent advisor of the Supreme Constitutional Court of Austria, and the author of Austria's Constitution, which was enacted in 1920, abolished during the Anschluss, and restored in 1945. The author of more than forty books on law and legal philosophy, he is best known for this work and *General Theory of Law and State*. Also active as a teacher in Europe and the United States, he was Dean of the Law Faculty of the University of Vienna and taught at the universities of Cologne and Prague, the Institute of International Studies in Geneva, Harvard, Wellesley, the University of California at Berkeley, and the Naval War College. Also available in cloth.

The Blank Slate Mar 22 2020 A brilliant inquiry into the origins of human nature from the author of *Rationality, The Better Angels of Our Nature*, and *Enlightenment Now*. "Sweeping, erudite, sharply argued, and fun to read..also highly persuasive." --Time Updated with a new afterword One of the world's leading experts on language and the mind explores the idea of human nature and its moral, emotional, and political colorings. With characteristic wit, lucidity, and insight, Pinker argues that the dogma that the mind has no innate traits—a doctrine held by many intellectuals

during the past century-denies our common humanity and our individual preferences, replaces objective analyses of social problems with feel-good slogans, and distorts our understanding of politics, violence, parenting, and the arts. Injecting calm and rationality into debates that are notorious for ax-grinding and mud-slinging, Pinker shows the importance of an honest acknowledgment of human nature based on science and common sense.

Speech Act Theory and Communication Jan 20 2020 Speech Act Theory: A Univen Study was undertaken to investigate the pragmatic value of the utterances of selected students at the University of Venda, South Africa. Utterances of second-language users of a language reflect the wealth of their language experiences and hence caution has to be exercised when conducting an investigation into such utterances. It is within this background that this investigation was conducted into the meaning-creation strategies and abilities of the participants in this study. The very idiosyncratic utterances investigated demonstrated vividly the multi-dimensional thought process exploited by the creators of these samples. Also demonstrated by the analyses is the nature of communication and the amount of linguistic interaction necessary for interlocutors to create meaning.

Ideal Code, Real World Dec 11 2021 What are appropriate criteria for assessing a theory of morality? In *Ideal Code, Real World*, Brad Hooker begins by answering this question, and then argues for a rule-consequentialist theory. According to rule-consequentialism, acts should be assessed morally in terms of impartially justified rules, and rules are impartially justified if and only if the expected overall value of their general internalization is at least as great as for any alternative rules. In the course of developing his rule-consequentialism, Hooker discusses impartiality, well-being, fairness, equality, the question of how the 'general internalization' of rules is to be interpreted by rule-

consequentialism, and the main objections to rule-consequentialism. He also discusses the social contract theory of morality, act-consequentialism, and the question of which moral prohibitions and which duties to help others rule-consequentialism endorses. The last part of the book considers the implications of rule-consequentialism for some current controversies in practical ethics.

The Juridical Act Jul 18 2022 This book puts forward a new theoretical concept of the juridical act, this concept is not described from the perspective of a specific national legal system, but instead represents the commonalities and ideas that stem from the Western legal tradition. Since the concept is system-independent, it does not rely on national or state laws. The book begins by detailing those characteristics that distinguish juridical acts from the general group of acts. It offers clear distinctions between the different aspects of juridical acts, such as the power and the competence needed in order to perform the act, the fact that juridical acts are constitutive speech acts, and the rules that connect the act with its consequences. In the process, the book dispels much of the haziness currently surrounding juridical acts. Developed with a mix of theory and practice, this new concept is better equipped to deal with modern trends and practices. Further, since the author has freed the idea of the juridical act from the bonds of history and geography, it is also more suited to facilitating a better understanding of and explaining changes in the legal landscape, such as the rise of computer technology. Accordingly, it offers scholars and practitioners alike a valuable new tool for explaining and theorizing about the law.

Toward a Speech Act Theory of Literary Discourse Apr 03 2021

The Research Act Mar 26 2023 At once a unique textbook for methods courses and a major contribution to sociological theory, this book teaches students the principles of research and how to construct and test theories. It brings coherence to the study of

methods by presenting four major approaches to experimentation: survey research, participant observation, life histories, and unobtrusive measures from a single theoretical point of view, symbolic interaction. It demonstrates the need for a synthesis between theory and methods, and shows how different methods limit and affect research results. Denzin's argues that no single method, theory, or observer can capture all that is relevant or important in reality. He argues for the use of triangulation and for a view of theory and methods as "concept sensitizers." His approach enables sociologists to acquire specific facts about a particular situation while simultaneously elevating these to the level of shared meaning. The author shows students how to proceed with research, bringing sharply into focus the possibilities and their limitations. Since his view is integrated rather than eclectic, this is much more than a "how to do it" manual. Denzin points out aspects of research that fall outside the scope of a given method yet affect results, and emphasizes the need to employ several methods to cross-check each other. "The Research Act" covers all the content of conventional methods courses. The presentation is exciting and imaginative, and provides a thorough review of major sociological methods, a cogent statement about approaches to sociological inquiry, and a source from which a understanding of the problems of research can be derived. "Norman K. Denzin" is professor of sociology, cinema studies, and interpretive theory at the University of Illinois, Urbana-Champaign. He was awarded the George Herbert Mead Award for Lifetime Achievement from the Society for the Study of Symbolic Interaction. He is the author of several books, including "The Alcoholic Society, Children and Their Caretakers, Hollywood Shot by Shot, Sociological Methods" and "The Values of Social Science" all available from Transaction.

Why Nations Act Feb 19 2020

On War Sep 08 2021 Writing at the time of Napoleon's greatest campaigns, Prussian soldier and writer Carl von Clausewitz

created this landmark treatise on the art of warfare, which presented war as part of a coherent system of political thought. In line with Napoleon's own military actions, he illustrated the need to annihilate the enemy and make a strong display of one's power in an 'absolute war' without compromise. But he was also careful to distinguish between war and politics, arguing that war could only be justified when debate was no longer adequate, and that if undertaken, its aim should ultimately be to improve the wellbeing of the nation.

A Contextual Behavioral Guide to the Self Jun 24 2020 The self plays an integral role in human motivation, cognition, and social identity. A Contextual Behavioral Guide to the Self translates this difficult—yet essential—therapeutic process into easy-to-apply steps and user-friendly language. For many clients, it's incredibly difficult to shed preconceived notions of “who they really are,” and negative perceptions of the self can lead to feelings of low self-worth that stand in the way of treatment. Furthermore, every client who partakes in acceptance and commitment therapy (ACT) must identify a self as part of their treatment, and clinicians often report that observing the self, or “self as context,” is the most difficult of all six core ACT processes. Problems with the self arise when clients orient themselves in the world and learn to relate to others, but these problems can vary considerably. For example, some clients may have deficits in developing a strong sense of self in the first place—particularly if they are diagnosed with autism spectrum conditions (ASC). Depressed clients or those with borderline personality disorder (BPD) may develop a skewed, negative sense of self, and those with narcissistic personality disorder (NPD) may develop an inflated sense of self. With this unique road map, you will learn to apply the complex theory of the self into everyday practice, and help all clients develop empathy, compassion, and flexible perspective taking—leading to better treatment outcomes and better lives for clients.

Act and Crime Aug 07 2021 In print for the first time in over ten

years, *Act and Crime* provides a unified account of the theory of action presupposed by both Anglo-American criminal law and the morality that underlies it. The book defends the view that human actions are always volitionally caused bodily movements and nothing else. The theory is used to illuminate three major problems in the drafting and the interpretation of criminal codes: 1) what the voluntary act requirement both does and should require; 2) what complex descriptions of actions prohibited by criminal codes both do and should require (in addition to the doing of a voluntary act); and 3) when two actions are 'the same' for purposes of assessing whether multiple prosecutions and multiple punishments are warranted. The book both contributes to the development of a coherent theory of action in philosophy, and it provides both legislators and judges (and the lawyers who argue to both) a grounding in three of the most basic elements of criminal liability.

Information Theory, Inference and Learning Algorithms Apr 22 2020 Information theory and inference, taught together in this exciting textbook, lie at the heart of many important areas of modern technology - communication, signal processing, data mining, machine learning, pattern recognition, computational neuroscience, bioinformatics and cryptography. The book introduces theory in tandem with applications. Information theory is taught alongside practical communication systems such as arithmetic coding for data compression and sparse-graph codes for error-correction. Inference techniques, including message-passing algorithms, Monte Carlo methods and variational approximations, are developed alongside applications to clustering, convolutional codes, independent component analysis, and neural networks. Uniquely, the book covers state-of-the-art error-correcting codes, including low-density-parity-check codes, turbo codes, and digital fountain codes - the twenty-first-century standards for satellite communications, disk drives, and data broadcast. Richly illustrated, filled with worked examples and

over 400 exercises, some with detailed solutions, the book is ideal for self-learning, and for undergraduate or graduate courses. It also provides an unparalleled entry point for professionals in areas as diverse as computational biology, financial engineering and machine learning.

ACT & RFT in Relationships May 04 2021 Combining elements of acceptance and commitment therapy (ACT) and relational frame theory (RFT), ACT and RFT for Relationships presents a unique approach for therapists to help clients develop and experience deeper, more loving relationships. By exploring personal values and expectations, and by addressing central patterns of behaviors, therapists can help their clients establish and maintain intimacy with their partner and gain a greater understanding of their relationship as a whole.

How Organizations Act Together Nov 22 2022 The proliferation of giant multi-organizational agencies in the last decade has fostered a rethinking of inter-organizational interactions. By synthesizing emerging planning theories with the most recent research in the field, How Organizations Act Together offers a unique and comprehensive perspective on how modern organizations interact. From missions to the moon to management and modern public policy, Alexander unravels the complexities of interorganizational coordination, providing students and scholars with the tools for understanding.

ncarb.swapps.dev
