Medicine since the last edition  
of our textbook. For example,  
not only is the therapy of  
human immunodeficiency virus  
(HIV) disease and the acquired  
immunodeficiency syndrome  
(AIDS) much different than a  
few years ago; the epidemiol  
ogy of the disease has also  
changed and more than half of  
the family physicians in a rural  
state such as Oregon have  
already managed patients with  
HIV disease or AIDS. 1 There  
are new immunization  
recommendations for children  
and new antibiotics for the

treatment of bacterial infections. Computers are bringing medical informatics and on-line consultation into office practice. Medicare physician payment reform is underway and the reality of rationing medical care has been recognized. There has been a recent increase in student interest in a family practice career,<sup>2</sup> coincidental with a Council on Graduate Medical Education (COGME) recommendation that at least 50 percent of all residency graduates<sup>3</sup> should enter practice as generalists. Also there is increasing awareness of the need for a<sup>4</sup> Center for Family Practice and Primary Care at the National Institutes of Health. This all-new fourth edition is intended to present the scientific and practical basis of family medicine with special attention to what's new in family medicine. The emphasis is on how the physician provides continuing and comprehensive care for persons of all ages, with clinical content selected from the perspective of family

physicians. The format of the book, like the practice of family medicine, continues to change. ### **Principles and Practices for a Federal Statistical Agency**

Nov 17 2021 Publicly available statistics from government agencies that are credible, relevant, accurate, and timely are essential for policy makers, individuals, households, businesses, academic institutions, and other organizations to make informed decisions. Even more, the effective operation of a democratic system of government depends on the unhindered flow of statistical information to its citizens. In the United States, federal statistical agencies in cabinet departments and independent

agencies are the governmental units whose principal function is to compile, analyze, and disseminate information for such statistical purposes as describing population characteristics and trends, planning and monitoring programs, and conducting research and evaluation. The work of these agencies is coordinated by the U.S. Office of Management and Budget. Statistical agencies may acquire information not only from surveys or censuses of people and organizations, but also from such sources as government administrative records, private-sector datasets, and Internet sources that are judged of suitable quality and relevance for statistical use. They may conduct analyses, but they do not advocate policies or take partisan positions. Statistical purposes for which they provide information relate to descriptions of groups and exclude any interest in or identification of an individual person, institution, or economic unit. Four principles are

fundamental for a federal statistical agency: relevance to policy issues, credibility among data users, trust among data providers, and independence from political and other undue external influence.Â Principles and Practices for a Federal Statistical Agency: Sixth Edition presents and comments on these principles as they've been impacted by changes in laws, regulations, and other aspects of the environment of federal statistical agencies over the past 4 years.
