Omics Analysis of Plants under Abiotic Stress Feb 25 2023 This new volume highlights the various emerging techniques and molecular applications that are currently being used in plant abiotic stress physiology. It provides a thorough overview of omics approaches in response to stressors such as low water accessibility (drought), excess water (flooding/waterlogging), extremes of temperatures (cold, chill, frost, and heat), salinity, mineral deficiency, and heavy metal toxicity-many of which are the result of climate change. The book, with chapters contributed by specialists in the field, emphasizes the broad variety of themes using an omics analysis of plants under abiotic stress factors at the cellular and molecular levels. The chapter authors explore a variety of approaches to address plant abiotic stress, including proteomic approaches, genome editing applications, and system biology approaches. The volume takes into consideration, from omics perspective, how to use the plant-microbe interaction to make plants more resilient to changing climates. It also looks at the role of ionomics (the study of complete mineral nutrient and trace elemental composition of a plant species) and osmoprotectants to address multiple abiotic stress tolerance in plants. Omics Analysis of Plants under Abiotic Stress provides the fundamental information for all who are working in or have interest in this specific field. Unquestionably, this volume will be beneficial for common use of research students, teachers, and persons who have interest in plant abiotic stress physiology.

Syntax Jul 06 2021 This new edition of "Syntax: A functional-typological introduction" is at many points radically revised. In the previous edition (1984) the author deliberately chose to de-emphasize the more formal aspects of syntactic structure, in favor of a more comprehensive treatment of the semantic and pragmatic correlates of syntactic structure. With hindsight the author now finds the de-emphasis of the formal properties a somewhat regrettable choice, since it creates the false impression that one could somehow be a functionalist without being at the same time a structuralist. To redress the balance, explicit treatment is given to the core formal properties of syntactic constructions, such as constituency and hierarchy (phrase structure), grammatical relations and relational control, clause union, finiteness and governed constructions. At the same time, the cognitive and communicative underpinning of grammatical universals are further elucidated and underscored, and the interplay between grammar, cognition and neurology is outlined. Also the relevant typological database is expanded, now exploring in greater precision the bounds of syntactic diversity. Lastly, Syntax treats synchronic-typological diversity more explicitly as the dynamic by-product of diachronic development or grammaticalization. In so doing a parallel is drawn between linguistic diversity and diachrony on the one hand and biological diversity and evolution on the other. It is then suggested that as in biology synchronic universals of grammar are exercised and instantiated primarily as constraints on development, and are thus merely the apparent by-products of universal constraints on grammaticalization.

International Perspectives on Climate Change May 04 2021 This collected volume deals with emerging issues related to climate variation, climate change and adaptation technologies, with a special focus on Latin American countries. Presenting a variety of adaptation strategies and projects currently being undertaken and implemented, the book showcases how Latin American nations are struggling to meet the challenges of climate change. Latin America as a whole and Central America in particular is one of the most vulnerable regions of the world and is severely affected by recurrent extreme climate-related events. This volume documents and analyzes the main challenges and lessons learned, serving to disseminate knowledge beyond the region and enhance international research and policy cooperation.

**The Center Circle Approach** Jun 05 2021 Why pursue balance, trying to please everyone, giving a little to everything, and suffer the constant stress of trying to do it all? Think about it, when a newly married man says he needs more work-life balance, what he is truly saying is he needs to spend more time at home...even if it means less time at work. A woman who is seeking a promotion at work tends to find more fulfillment when she spends more time at work, even if it means less time at home for that time period. As Alain de Botton, a Swiss-British writer and television presenter so eloquently put it - "There is no such thing as work-life balance. Everything worth fighting for unbalances your life." This is what The Center Circle Approach is about. It provides a refreshingly simple, yet profound new take on the subject of living a fulfilled life. It equips you to ditch the concept of a "balanced life" for that of a "centered life", one that may seem unbalanced but is centered on your key priorities....

**Political Economy of Statebuilding** Oct 09 2021 This volume examines and evaluates the impact of international statebuilding interventions on the political economy of post-conflict countries over the past 20 years. While statebuilding today is typically discussed in the context of peacebuilding and stabilisation operations, the current phase of interest in external interventions to (re)build and strengthen governmental institutions can be traced back to the good governance policies of the International Financial Institutions (IFIs) in the early 1990s. These sought political changes and improvements in the quality of governance in countries that were subject to, or were seeking support under, IFI-designed structural adjustment programmes. The focus of this book is specifically on state-building efforts in conflict-affected countries: countries that are emerging, or have recently emerged, from periods of war and violent conflict. The interventions covered in the present volume fall into three broad and overlapping categories: International administrations and transformative occupations (East Timor, Iraq, and Kosovo); Complex peace operations (Afghanistan, Burundi, Haiti, and Sudan); Governance and state-building programmes conducted in the context of economic assistance (Georgia and Macedonia). This book will be of much interest to students of statebuilding, humanitarian intervention, post-conflict reconstruction, political economy, international organisations and IR/Security Studies in general.

Sengoidelc Nov 10 2021 David Stifter's Sengoidelc (SHAN-goy-thelg) provides a comprehensive introduction to Old Irish grammar and metrics. As an introductory text to the Irish language spoken around the eighth century C.E., this essential volume, covering all aspects of the grammar in a clear and intuitive format, is ideally suited for use as a course book or as a guide for the independent learner. This handbook also will be an essential reference work for students of Indo-European philology and historical linguistics. Stifter leads the novice through the idiosyncrasies of the language, such as initial mutations and the double inflection of verbs. Filled with translation exercises based on selections from Old Irish texts, the book provides a practical introduction to the language and its rich history. Sengoidelc opens the door to the fascinating world of Old Irish literature, famous not only for the Táin Bó Cúailnge (The Cattle Raid of Cúailnge) and its lyrical nature poetry but also as a major source for the political and legal history of Ireland. Stifter's step-by-step approach and engaging style make his book an ideal tool for both the self taught individual and the classroom environment. It will be of interest to beginning students of Old and Middle Irish, to scholars of Irish history, Celtic culture, and comparative linguistics, and to readers of Irish literature.

**Financial Innovation and Resilience** May 24 2020 As Ignazio Visco, Governor of the Bank of Italy, says in his Foreword, all economic policy makers today need to re-examine our history to help them confront the challenges of today. This edited volume focuses specifically on the theme of financial innovation and how financial resiliency was achieved in Naples. To highlight both the achievements of the public banks of Naples and their lessons for financial resiliency, the book focuses on financial crises and how they were overcome in Naples in contrast to other European financial systems. The first section focuses on the development of the public banks unique to Naples. The second section compares those with other banking systems and how they responded to the same shock in 1622, caused by the full mobilization of European belligerents to finance their efforts in the Thirty Years War. The next section compares lessons learned in the rest of Europe over the next century and a half. The final section comes back to original start of the narrative arc to suggest ways that today's policymakers and thinkers could use the historical experience of the public banks of Naples to deal better with the ongoing problems stemming from the financial crisis of 2007-08.

**Medieval Philosophy and Modern Times** Oct 21 2022 Modern developments in philosophy have provided us with tools, logical and methodological, that were not available to Medieval thinkers - a development that has its dangers as well as opportunities. Modern tools allow one to penetrate old texts and analyze old problems in new ways, offering interpretations that the old thinkers could not have known. But unless one remains sensitive to the fact that language has undergone changes, bringing with it a shift in the meaning of terminology, one can easily perpetrate an anachronism. Yet there is a growing need to bring modern tools and to bear on the struggle for greater understanding of the problems studied and the solutions found by the ancient scholars. If we remain sensitive to the dangers, this openness to new methods can be expected to widen our perspectives and deepen our knowledge of old material. The focus in the present volume is on problems in Medieval and contemporary philosophy of religion.
