For several decades now David Nimmer has maintained a steady flow of insightful, witty, and deeply-informed commentary on copyright in the law journals. His well-earned reputation as a major authority and theorist on copyright law is unassailable. In this new volume—and—a companion to his very well received Copyright: Sacred Text, Technology, and the DMCA, published by Kluwer in 2003—and—Nimmer once again tackles some of the thorniest issues that arise in the practice of copyright law, including the following and much more: and• the work for hire doctrine? and• repeat infringers; and• fair use determination; and and• substantial similarity of computer programs. Although the volume collects articles originally published between 1988 and 2006 (mostly in the past few years), Nimmer has scrupulously updated the texts and woven them together into a unified whole. What the book offers as a result is a microscopic scrutiny of the U.S. Copyright Act of 1976 and all its amendments, with an immeasurable abundance of interpretation grounded in the author's unmatched familiarity with the law and its application. This is a work that no lawyer handling copyright cases—and—or indeed no student or scholar of any branch of intellectual property law—and—will want to be without. Ray DiGiacomo, Jr. San Juan Capistrano, California Initiated by The King Center in association with Standford University. "The paper studies regional (spatial) inequality in the five most populous countries in the world: China, India, the United States, Indonesia, and Brazil in the period 1980-2000. They are all federations or quasi-federations composed of entities with substantial economic autonomy. Two types of regional inequalities are considered: Concept 1 inequality, which is inequality between mean incomes (GDP per capita) of states/provinces, and Concept 2 inequality, which is inequality between population-weighted regional mean incomes. The first inequality speaks to the issue of regional convergence, the second, to the issue of overall inequality as perceived by citizens within a nation. All three Asian countries show rising inequality in terms of both concepts in the 1990s. Divergence in income outcomes is particularly noticeable for the most populous states/provinces in China and India. The United States, where regional inequality is the least, shows further convergence. Brazil, with the highest level of regional inequality, displays no trend. A regression analysis fails to establish robust association between the usual macroeconomic variables and the two types of regional inequality. "--World Bank web site.
